You may be a good candidate for MAKOplasty®, an innovative treatment option powered by the RIO® Robotic Arm Interactive Orthopedic System.

MAKOplasty® offers people with early to mid-stage osteoarthritis of the knee a less invasive treatment option than total knee replacement. It enables surgeons to precisely target only the diseased portion of the knee, without compromising the healthy bone and tissue surrounding it.

Potential Benefits Include:

- Shorter hospital stay
- More rapid recovery and return to an active lifestyle
- More natural feeling knee post-operatively

And for you, that can mean relief from pain and a rapid return to daily activities.

** Individual results may vary. There are risks associated with any knee surgical procedure, including MAKOplasty.® Your doctor can explain these risks and help determine if MAKOplasty® is right for you.*
